# Chapter 1

## liburbi-cpp Hierarchical Index

### 1.1 liburbi-cpp Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

|                           |    |
|---------------------------|----|
| UAbstractClient . . . . . | 7  |
| UClient . . . . .         | 14 |
| USyncClient . . . . .     | 19 |
| UBinary . . . . .         | 13 |
| UImage . . . . .          | 16 |
| UMessage . . . . .        | 17 |
| USound . . . . .          | 18 |

## Chapter 2

# liburbi-cpp Class Index

### 2.1 liburbi-cpp Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

|   |    |
|---|----|
| <b>UAbstractClient</b> (Interface for an URBI wrapper object ) . . . . .  | 7  |
| <b>UBinary</b> (Class containing binary data sent by the server, that could not be further interpreted ) . . . . .  | 13 |
| <b>UClient</b> (Linux implementation of <b>UAbstractClient</b> (p. 7) ) . . . . .                                   | 14 |
| <b>UImage</b> (Class encapsulating an image ) . . . . .   | 16 |
| <b>UMessage</b> (Class containing all informations related to an URBI message ) . . . . .                           | 17 |
| <b>USound</b> (Class encapsulating sound informations ) . . . . .   | 18 |
| <b>USyncClient</b> ( <b>UClient</b> (p. 14) linux implementation with support for synchronous functions ) . . . . . | 19 |

## Chapter 3

# liburbi-cpp File Index

### 3.1 liburbi-cpp File List

Here is a list of all documented files with brief descriptions:

|                            |    |
|----------------------------|----|
| <b>uabstractclient.cpp</b> | 21 |
| <b>uabstractclient.h</b>   | 24 |
| <b>uclient.cpp</b>         | ?? |
| <b>uclient.h</b>           | 27 |
| <b>usyncclient.cpp</b>     | ?? |
| <b>usyncclient.h</b>       | 28 |

## Chapter 4

# liburbi-cpp Class Documentation

### 4.1 UAbstractClient Class Reference

Interface for an URBI wrapper object.

```
#include <uabstractclient.h>
```

Inheritance diagram for UAbstractClient::

#### Public Member Functions

- **UAbstractClient** (const char \*\_host, int \_port=**URBI\_PORT**, int \_buflen=**URBI\_BUFLN**)  
*Create a new instance and connect to the Urbi server.*
- int **error** ()  
*Return current error status, or zero if no error occurred.*
- int **send** ()  
*Function for backward compatibility. Will be removed in future versions.*
- int **send** (const char \*format,...)  
*Send an Urbi command. The syntax is similar to the printf() function.*
- int **sendBin** (const void \*, int len)  
*Send binary data.*
- int **sendBin** (const void \*, int len, const char \*header,...)

*Send an Urbi header followed by binary data.*

- int **startPack** ()  
*Lock the send buffer.*
- int **endPack** ()  
*Unlock the send buffer.*
- int **pack** (const char \*,...)  
*Append Urbi commands to the send buffer.*
- int **vpack** (const char \*, va\_list args)  
*va\_list version of pack.*
- int **sendFile** (const char \*filename)  
*Send urbi commands contained in a file.*
- UCallbackID **sendCommand** (UCallback, const char \*,...)  
*Send a command and associate its tag with a callback. \*/.*
- UCallbackID **sendCommand** (UCustomCallback, void \*, const char \*,...)  
*Send a command and associate its tag with a callback. \*/.*
- int **sendSound** (const char \*device, const **USound** &sound, const char \*tag=NULL)  
*Send sound data to the robot for immediate playback.*
- int **putFile** (const char \*localName, const char \*remoteName=NULL)  
*Put a file on the robot's mass storage device.*
- int **putFile** (const void \*buffer, int length, const char \*remoteName)  
*Save a buffer to a file on the robot.*
- UCallbackID **setCallback** (UCallback, const char \*tag)  
*Associate a callback function with a tag.*
- UCallbackID **setCallback** (UCustomCallback, void \*callbackData, const char \*tag)
- template<class C> UCallbackID **setCallback** (C &ref, UCallbackAction(C::\*)(const UMessage &), const char \*tag)  
*Callback to class member functions.*
- template<class C, class P1> UCallbackID **setCallback** (C &ref, UCallbackAction(C::\*)(P1, const UMessage &), P1, const char \*tag)
- template<class C, class P1, class P2> UCallbackID **setCallback** (C &ref, UCallbackAction(C::\*)(P1, P2, const UMessage &), P1, P2, const char \*tag)
- template<class C, class P1, class P2, class P3> UCallbackID **setCallback** (C &ref, UCallbackAction(C::\*)(P1, P2, P3, const UMessage &), P1, P2, P3, const char \*tag)
- template<class C, class P1, class P2, class P3, class P4> UCallbackID **setCallback** (C &ref, UCallbackAction(C::\*)(P1, P2, P3, P4, const UMessage &), P1, P2, P3, P4, const char \*tag)
- bool **getAssociatedTag** (UCallbackID id, char \*tag)

*Get the tag associated with a registered callback.*

- **int deleteCallback** (UCallbackID callBackID)  
*Delete a callback.*
- **void makeUniqueTag** (char \*tag)  
*Fill tag with a unique tag.*
- **void notifyCallbacks** (const UMessage &msg)  
*Simulate an Urbi message.*
- **virtual void errorNotify** (const char \*format,...)=0  
*Notify of an error.*

## Protected Member Functions

- **void processRecvBuffer** ()  
*Called each time new data is available in recvBuffer.*
- **virtual int effectiveSend** (const void \*buffer, int size)=0  
*Queue data for sending, returns zero on success, nonzero on failure.*
- **virtual bool canSend** (int size)=0  
*Check if successive effectiveSend() of cumulated size 'size' will succeed.*
- **virtual void lockList** ()=0  
*Lock and unlock receive and send portions of the code.*
- **virtual void lockSend** ()=0
- **virtual void unlockList** ()=0
- **virtual void unlockSend** ()=0
- **UCallbackID addCallback** (const char \*tag, UCallbackWrapper &w)  
*Add a callback to the list.*

## Protected Attributes

- **char \* host**  
*Host name.*
- **int port**  
*URBI Port.*
- **int buflen**  
*URBI Buffer length.*
- **int rc**  
*System calls return value storage.*

- `char * recvBuffer`  
*Reception buffer.*
- `int recvBufferPosition`  
*Current position in reception buffer.*

#### 4.1.1 Detailed Description

Interface for an URBI wrapper object.

Implementations of this interface are wrappers around the URBI protocol. It handles URBI messages parsing, callback registration and various formatting functions. Implementations of this interface should:

- Redefine `errorNotify()` as a function able to notify the user of eventual errors.
- Redfine the four mutual exclusion functions.
- Redefine `effectiveSend()`.
- Fill `recvBuffer`, update `recvBufferPosition` and call `processRecvBuffer()`(p.11) when new data is available.
- Provide an `execute()` function in the namespace `urbi`, that never returns, and that will be called after initialization.

See the liburbi-cpp documentation for more informations on how to use this class.

Definition at line 227 of file `uabstractclient.h`.

#### 4.1.2 Constructor & Destructor Documentation

##### 4.1.2.1 `UAbstractClient::UAbstractClient (const char * _host, int _port = URBI_PORT, int _buflen = URBI_BUFLen)`

Create a new instance and connect to the Urbi server.

Initializes `sendBuffer` and `recvBuffer`, and copy `_host` and `_port`.

##### Parameters:

- \_host* IP address or name of the robot to connect to.
- \_port* TCP port to connect to.
- \_buflen* size of send and receive buffers. Implementations should establish the connection in their constructor.

Definition at line 127 of file `uabstractclient.cpp`.

References `buflen`, `host`, `port`, `rc`, `recvBuffer`, and `UAbstractClient()`.

Referenced by `UAbstractClient()`.

### 4.1.3 Member Function Documentation

#### 4.1.3.1 int UAbstractClient::pack (const char \* *command*, ...)

Append Urbi commands to the send buffer.

This function must only be called between a **startPack()**(p.11) and the corresponding **endPack()**(p.8). Data is queued in the send buffer, and sent when endPack() is called.

Definition at line 222 of file uabstractclient.cpp.

References pack(), rc, and vpack().

Referenced by pack().

#### 4.1.3.2 void UAbstractClient::processRecvBuffer () [protected]

Called each time new data is available in recvBuffer.

As long as this function has not returned, neither recvBuffer nor recvBufferPos may be modified.

Definition at line 579 of file uabstractclient.cpp.

References errorNotify(), lockList(), notifyCallbacks(), recvBuffer, and recvBufferPosition.

Referenced by UClient::listenThread().

#### 4.1.3.3 int UAbstractClient::send (const char \* *command*, ...)

Send an Urbi command. The syntax is similar to the printf() function.

Multiple commands can be sent in one call.

Definition at line 199 of file uabstractclient.cpp.

References effectiveSend(), rc, and vpack().

#### 4.1.3.4 int UAbstractClient::sendSound (const char \* *device*, const USound & *sound*, const char \* *tag* = NULL)

Send sound data to the robot for immediate playback.

If tag is set, the corresponding callback will be called when sound play will be finished. The sound part of the message will be set with the content of the sound parameter. The sound data is copied in case of asynchronous send, and may be safely deleted as soon as this function returns.

Definition at line 424 of file uabstractclient.cpp.

References USound::channels, USound::data, deleteCallback(), makeUniqueTag(), USound::rate, USound::sampleFormat, USound::sampleSize, sendBin(), sendSound(), setCallback(), USound::size, and USound::soundFormat.

Referenced by sendSound().

#### 4.1.3.5 int UAbstractClient::startPack ()

Lock the send buffer.

In threaded environments, this function locks the send buffer so that only the calling thread can call the send functions. Otherwise do nothing.

Definition at line 180 of file uabstractclient.cpp.

The documentation for this class was generated from the following files:

- **uabstractclient.h**
- **uabstractclient.cpp**

## 4.2 UBinary Class Reference

Class containing binary data sent by the server, that could not be further interpreted.

```
#include <uabstractclient.h>
```

### Public Attributes

- void \* **data**  
*binary data*
- char \* **message**  
*message as sent by the server*
- int **size**

#### 4.2.1 Detailed Description

Class containing binary data sent by the server, that could not be further interpreted.

Definition at line 129 of file uabstractclient.h.

The documentation for this class was generated from the following file:

- **uabstractclient.h**

## 4.3 UClient Class Reference

Linux implementation of **UAbstractClient**(p. 7).

```
#include <uclient.h>
```

Inheritance diagram for UClient::

### Public Member Functions

- **UClient** (const char \* \_host, int \_port=**URBI\_PORT**, int \_buflen=**URBI\_BUFLLEN**)
- void **start** ()  
*For compatibility with older versions of the library.*
- void **listenThread** ()  
*For internal use.*
- virtual void **errorNotify** (const char \*format,...)  
*Notify of an error.*

### Protected Member Functions

- virtual int **effectiveSend** (const void \*buffer, int size)  
*Queue data for sending, returns zero on success, nonzero on failure.*
- virtual bool **canSend** (int size)  
*Check if successive effectiveSend() of cumulated size 'size' will succeed.*
- virtual void **lockList** ()  
*Lock and unlock receive and send portions of the code.*
- virtual void **lockSend** ()
- virtual void **unlockList** ()
- virtual void **unlockSend** ()

### Protected Attributes

- int **sd**  
*Socket file descriptor.*

### 4.3.1 Detailed Description

Linux implementation of **UAbstractClient**(p. 7).

This implementation creates a thread for each instance of UClient, which listens on the associated socket.

Definition at line 35 of file uclient.h.

The documentation for this class was generated from the following files:

- **uclient.h**
- **uclient.cpp**

## 4.4 UIImage Class Reference

Class encapsulating an image.

```
#include <uabstractclient.h>
```

### Public Attributes

- **char \* data**  
*pointer to image data*
- **int size**  
*image size in byte*
- **int width**
- **int height**  
*size of the image*
- UIImageFormat **imageFormat**

#### 4.4.1 Detailed Description

Class encapsulating an image.

Definition at line 104 of file uabstractclient.h.

The documentation for this class was generated from the following file:

- **uabstractclient.h**

## 4.5 UMessage Class Reference

Class containing all informations related to an URBI message.

```
#include <uabstractclient.h>
```

### Public Member Functions

- **UMessage** (**UAbstractClient** &**client**, int **timestamp**, char \***tag**, char \***message**, void \***buffer**=NULL, int **length**=0)

*This constructor steals the pointers, no copy is made.*

- **UMessage** (const **UMessage** &**source**, bool **allocate**=true)

*If allocate is true, everything is copied, else pointers are stolen.*

- **~UMessage** ()

*Free everything if data was copied, doesn't free anything otherwise.*

### Public Attributes

- **UAbstractClient** & **client**

*connection from which originated the message*

- int **timestamp**

*server-side timestamp*

- char \* **tag**

*associated tag*

- **UMessageType** **type**

- **UBinaryMessageType** **binaryType**

#### 4.5.1 Detailed Description

Class containing all informations related to an URBI message.

Definition at line 138 of file `uabstractclient.h`.

The documentation for this class was generated from the following files:

- **uabstractclient.h**
- **uabstractclient.cpp**

## 4.6 USound Class Reference

Class encapsulating sound informations.

```
#include <uabstractclient.h>
```

### Public Member Functions

- **bool operator==** (const **USound** &b) const

### Public Attributes

- **char \* data**  
*pointer to sound data*
- **int size**  
*total size in byte*
- **int channels**  
*number of audio channels*
- **int rate**  
*rate in Hertz*
- **int sampleSize**  
*sample size in bit*
- **USoundFormat soundFormat**  
*format of the sound data*
- **USoundSampleFormat sampleFormat**  
*sample format*

#### 4.6.1 Detailed Description

Class encapsulating sound informations.

Definition at line 113 of file uabstractclient.h.

The documentation for this class was generated from the following file:

- **uabstractclient.h**

## 4.7 USyncClient Class Reference

**UClient**(p. 14) linux implementation with support for synchronous functions.

```
#include <usyncclient.h>
```

Inheritance diagram for USyncClient::

### Public Member Functions

- **USyncClient** (const char \*\_host, int \_port=**URBI\_PORT**, int \_buflen=**URBI\_BUFLLEN**)
- int **syncSend** (const void \*buffer, int length)  
*Send given buffer without copying it.*
- int **syncGetImage** (const char \*cameraDevice, void \*buffer, int &buffersize, int format, int transmitFormat, int &width, int &height)  
*Get an image in a synchronous way.*
- int **syncGetDevice** (const char \*device, double &val)  
*Get the value of a device in a synchronous way.*
- int **syncGetNormalizedDevice** (const char \*device, double &val)  
*Get the normalized value of a device in a synchronous way.*
- int **syncGetDevice** (const char \*device, const char \*field, double &val)  
*Get a field of a device in a synchronous way.*
- int **syncGetSound** (const char \*device, int duration, **USound** &sound)  
*Get sound for duration milliseconds in buffer.*

#### 4.7.1 Detailed Description

**UClient**(p. 14) linux implementation with support for synchronous functions.

These functions differs from the **UClient**(p. 14) interface in that they are synchronous. One must seriously ponder the fact that they are not easily portable before using them.

Definition at line 38 of file usyncclient.h.

The documentation for this class was generated from the following files:

- **usyncclient.h**
- **usyncclient.cpp**

## Chapter 5

### 5.1.2 Function Documentation

#### 5.1.2.1 int convert (const **USound** & *source*, **USound** & *dest*)

Conversion between various sound formats.

If any of destination's channel, sampleSize, rate or sampleFormat parameter is 0, values from source will be used.

Definition at line 969 of file uabstractclient.cpp.

References **USound::channels**, **USound::data**, **USound::rate**, **USound::sampleFormat**, **USound::sampleSize**, **USound::size**, and **USound::soundFormat**.

Referenced by **USyncClient::syncGetSound()**.

**5.1.2.2** `void * read_jpeg (const char * jpgbuffer, int jpgbuffer_size, bool RGB, int  
& output_size) [static]`

Convert a jpeg image to YCrCb or RGB. Allocate the buffer with malloc.

Definition at line 862 of file uabstractclient.cpp.

### 5.2.2 Enumeration Type Documentation

#### 5.2.2.1 enum UCallbackAction

Return values for the callack functions.

Each callback function, when called, must return with either URBI\_CONTINUE or URBI\_REMOVE:

- URBI\_CONTINUE means that the client should continue to call this callbak function.
- URBI\_REMOVE means that the client should never call this callback again.

Definition at line 54 of file uabstractclient.h.

Referenced by UAbstractClient::notifyCallbacks().

### 5.2.3 Function Documentation

#### 5.2.3.1 int convert (const USound & *source*, USound & *dest*)

Conversion between various sound formats.

If any of destination,'s channel, sampleSize, rate or sampleFormat parameter is 0, values from source will be used.

Definition at line 969 of file uabstractclient.cpp.

References USound::channels, USound::data, USound::rate, USound::sampleFormat, USound::sampleSize, USound::size, and USound::soundFormat.

Referenced by USyncClient::syncGetSound().

## 5.3 uclient.h File Reference

```
#include "uabstractclient.h"
```

### Namespaces

- namespace **urbi**

### Classes

- class **UClient**  
*Linux implementation of UAbstractClient*(p. 7).
